

TEMPERATURES

POLYPROPYLENE

- For most of our polypropylene products, operating temperature ratings are -0°F to 150°F (-18 to 65C). Operating in temperatures above 150°F will cause the polypropylene to soften. As the polypropylene reaches the maximum temperature rating, the psi rating decreases.
- Storage temperature ratings are -67°F to 150°F (-55 to 65C).
